

AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions and listings of claims in the application:

1. (Currently Amended) A method for displaying data using a window having a width boundary comprising:

receiving data to be displayed;

determining that the received data cannot be displayed within the width boundary;

creating a first window and a second window based on the determination that the received data cannot be displayed within the width boundary;

selecting from the received data an attribute contained in the received data that will be displayed in both the first window and the second window;

splitting the received data into a first portion and a second portion, such that the first portion and the selected attribute will fit into the first window;

displaying the first portion of the received data and the selected attribute in the first window; and

displaying the second portion of the received data and the selected attribute in ~~wrapped into~~ the second window[.];

enabling deletion of a column of the displayed data from the first window, the deletion causing splitting of remaining displayed data in the first and second windows into a new first portion and a new second portion, such that the new first portion and the selected attribute will fit into the first window; and

displaying the new first portion and the selected attribute in the first window and
the new second portion and the selected attribute in the second window.

2. (Cancelled).
3. (Previously Presented) The method for displaying data of claim 1, wherein the data to be displayed comes from more than one data source.
4. (Cancelled).
5. (Currently Amended) The method for displaying data of claim 1, wherein displaying in the second window ~~portion of the received data~~ further comprises:
displaying a color to comprehend whether a row of data in the second window corresponds to a row of data in the first window.
6. (Cancelled).
7. (Cancelled).
8. (Previously Presented) The method for displaying data of claim 1, further comprising:
handling an event associated with the first window such that the event synchronously affects the second window.

9. (Currently Amended) A system for displaying data using a window having a width boundary comprising:

means for receiving data to be displayed;

means for determining that the received data cannot be displayed within the width boundary;

means for creating a first window and a second window based on the determination that the received data cannot be displayed within the width boundary;

means for selecting from the received data an attribute contained in the received data that will be displayed in both the first window and the second window;

means for splitting the received data into a first portion and a second portion, such that the first portion and the selected attribute will fit into the first window;

means for displaying the first portion of the received data and the selected attribute in the first window; and

means for displaying the second portion of the received data and the selected attribute in wrapped into the second window[[.]];

means for deleting a column of the displayed data from the first window, the deletion causing splitting of remaining displayed data in the first and second windows into a new first portion and a new second portion, such that the new first portion and the selected attribute will fit into the first window; and

means for displaying the new first portion and the selected attribute in the first window and the new second portion and the selected attribute in the second window.

10. (Cancelled).

11. (Previously Presented) The system for displaying data of claim 9, wherein the data to be displayed comes from more than one data source.

12. (Cancelled).

13. (Currently Amended) The system for displaying data of claim 9, wherein the means for displaying in the second window ~~portion of the received data~~ further comprises:

means for displaying a color to comprehend whether a row of data in the second window corresponds to a row of data in the first window.

14. (Cancelled).

15. (Cancelled).

16. (Previously Presented) The system for displaying data of claim 9, further comprising:

means for handling an event associated with the first window such that the event synchronously affects the second window.

17. (Currently Amended) A computer program product for displaying data using a window having a width boundary comprising code for causing a processor to perform the steps of:

receiving data to be displayed;

determining that the received data cannot be displayed within the width boundary;

creating a first window and a second window based on the determination that the received data cannot be displayed within the width boundary;

selecting from the received data an attribute contained in the received data that will be displayed in both the first window and the second window;

splitting the received data into a first portion and a second portion, such that the first portion and the selected attribute will fit into the first window;

displaying the first portion of the received data and the selected attribute in the first window; and

displaying the second portion of the received data and the selected attribute in ~~wrapped into~~ the second window[.];

enabling deletion of a column of the displayed data from the first window, the deletion causing splitting of remaining displayed data in the first and second windows into a new first portion and a new second portion, such that the new first portion and the selected attribute will fit into the first window; and

displaying the new first portion and the selected attribute in the first window and the new second portion and the selected attribute in the second window.

18. (Cancelled).

19. (Previously Presented) The computer program product for displaying data of claim 17, wherein the data to be displayed comes from more than one data source.

20. (Cancelled).

21. (Currently Amended) The computer program product for displaying data of claim 17, wherein displaying in the second window ~~portion of the received data~~ further comprises:

displaying a color to comprehend whether a row of data in the second window corresponds to a row of data in the first window.

22. (Cancelled).

23. (Previously Presented) The computer program product for displaying data of claim 17, further comprising code for causing a processor to perform the step of:

handling an event associated with the first window such that the event synchronously affects the second window.

24. (Currently Amended) A method for displaying data on a display screen comprising:

receiving data to be displayed;

creating a first window and a second window if the received data cannot be displayed within a width of a single window;

selecting from the received data an attribute contained in the received data for display in the first window and the second window;

displaying a first portion of the received data and the selected attribute on a line in the first window; ~~and~~

displaying a second portion of the received data and the selected attribute wrapped onto a corresponding line in the second window[[]];

enabling deletion of a column of the displayed data from the first window, the deletion causing splitting of remaining displayed data in the first and second windows into a new first portion and a new second portion, such that the new first portion and the selected attribute will fit into the first window; and

displaying the new first portion and the selected attribute on a line in the first window and the new second portion and the selected attribute wrapped onto a corresponding line in the second window.

25. (Cancelled).

26. (Cancelled).

27. (Previously Presented) The method for displaying data of claim 24, wherein the data to be displayed comes from more than one data source.

28. (Cancelled).

29. (Currently Amended) The method for displaying data of claim 24, wherein displaying in the second window ~~portion of the received data~~ further comprises:

displaying a color to comprehend that the line in the first window wraps to the corresponding line in the second window.

30. (Cancelled).

31. (Cancelled).

32. (Cancelled).

33. (Previously Presented) The method for displaying data of claim 24, further comprising:

handling an event associated with the first window such that the event synchronously affects the second window.

34. (Currently Amended) The method for displaying data of claim 1, further comprising:

adding a distinguishing display feature to the displayed ~~first portion of the received data~~ in the first window in response to selection of the displayed data in the first window ~~first portion~~ by a user utilizing the first window; and

adding the distinguishing display feature to the displayed ~~second portion of the~~
~~received~~ data in the second window in response to selection of the displayed data in the
first window ~~first portion~~ by the user utilizing the first window.

35. (Currently Amended) The method for displaying data of claim 34, wherein
the distinguishing display feature is a color change ~~change~~.

36. (Previously Presented) The method for displaying data of claim 3, wherein
the more than one data source includes a website.

37. (Currently Amended) The method for displaying data of claim 8, wherein
the event includes sorting the displayed ~~received~~ data.

38. (Currently Amended) The computer program product of claim 17, further
comprising code for causing a processor to perform the steps of:

adding a distinguishing display feature to the displayed ~~first portion of the~~
~~received~~ data in the first window in response to selection of the displayed data in the
first window ~~first portion~~ by a user utilizing the first window; and

adding the distinguishing display feature to the displayed ~~second portion of the~~
~~received~~ data in the second window in response to selection of the displayed data in the
first window ~~first portion~~ by the user utilizing the first window.

39. (Previously Presented) The computer program product of claim 38, wherein the distinguishing display feature is a color change.

40. (Previously Presented) The computer program product of claim 19, wherein the more than one data source includes a website.

41. (Previously Presented) The computer program product of claim 23, wherein the event includes sorting the received data.

42. (Currently Amended) The method for displaying data of claim 24, further comprising:

adding a distinguishing display feature to the line displaying the ~~first portion of the~~ received data in the first window in response to selection of the line by a user utilizing the first window; and

adding the distinguishing display feature to the corresponding line in the second window in response to selection of the line by the user utilizing the first window.

43. (Previously Presented) The method for displaying data of claim 42, wherein the distinguishing display feature is a color change.

44. (Previously Presented) The method for displaying data of claim 27, wherein the more than one data source includes a website.

45. (Currently Amended) The method for displaying data of claim 33, wherein the event includes sorting the displayed ~~received~~ data.
